ACS Technologies CMS

System Installation Instructions

Step 1: Downloading the software to your desktop/laptop

Use this link www.acstechnologies.com/ondemandinfo

Select downloads **(see attached screen shot #1)**

Select appropriate instructions **(see attached screen shot #2)**

Follow instructions correctly and the "ACS" icon will appear on your desktop

Click the icon to launch the program

Step 2: Signing On

Use one of the three entry portal sign-ons **(see attached screen shot #3)**

Note: We currently are only authorized for 5 users at one time.
If your sign-on fails, please try again at a later time.

A successful sign-on will generate your ACS On-demand screen **(see attached screen shot #4)**

At this point if you are an authorized user you will have had further training on using ACS People Suite.

OnDemand

Tools

Lions and Macs and OnDemand, Oh My!
The OnDemand Mac client is not currently compatible with the upcoming Apple release of Lion (Mac OSX 10.7). If you upgrade to Lion, please be aware that OnDemand will not be operational until we are able to fix this compatibility issue. Our engineers are working to deliver an updated version that will be compatible, in the shortest amount of time possible.

- ### OnDemand FAQ's
- Can I have one user name and password for multiple products?
 - Since ACS already makes a backup for me, do I still need to make an ACS Backup before performing Year-End Procedures?
 - Why make an ACS Backup prior to performing Year-End Procedures, when one of the selling points of ACS OnDemand is that you make nightly backups, do I still have to load my Tax Table updates?

Downloading OnDemand

Added by Jamie Durant, last edited by Jamie Durant on Jul 15, 2011 (view change)

ACS HeadMaster PDS

Don't forget to select your product from the tabs at the top of the page prior to downloading.

⚠ We recommend using Internet Explorer® and Safari® Web browsers with OnDemand.

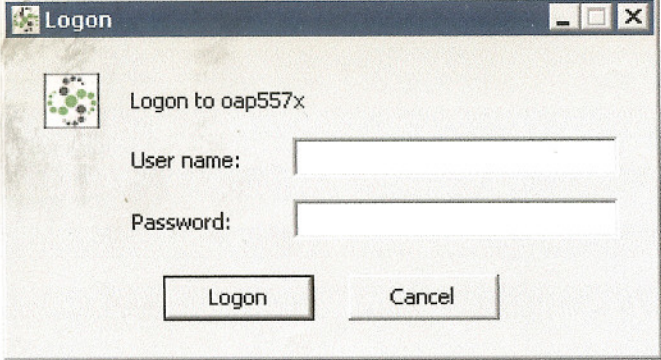

Using the latest Web browser to hit the Internet might make you look ultra-cool, but it could lead to some issues with OnDemand. If you use a browser other than Internet Explorer or Safari, we cannot guarantee how OnDemand will react in certain situations. We can, however, promise it won't turn into a monster if you feed it after midnight.
